- A unique business environment that provides registered eNotification and eContracting services as well as eSignature and identity validation

**BLOCKCHAIN  
COMPATIBLE**

# Registered eNotification and eContracting. eSignature

Forget about paper. Increase profitability. Add value.  
Improve user experience.

Any time, anywhere from any device. Designed to suit the needs of each company no matter how large or small they are.

## Features

Text messages and emails keep us in touch, no matter where we are. Nowadays, businesses are relying on these technology tools to reach their clients. For example, banks notify customers of loans to be signed, utility companies alert consumers about power outages and insurance companies communicate the changes in contractual terms.

Registered eNotification and eContracting, as well as eSignature, allow data transfer among parties and provide evidence related to the transmitted data, including proof of sending and receiving. They protect the transmitted data from the risks of loss or unauthorized alteration.

## Registered eNotification

### Registered SMS

Text message that can be used as evidence before a court of law.

### Registered Email

Email that can be used as evidence before a court of law.

### Registered Invoice

Send invoices via Registered Email.

### Openum

Electronic registered delivery.

### Registered Inbox

A mailbox that certifies all incoming messages, including their content and attachments.

### Openum eIDAS

Qualified electronic registered delivery service.

## Registered eContracting and eSignature

### Registered SMS Contract

Sign contracts via Registered SMS.

### Registered Email Contract

Sign contracts via Registered Email.

### Click & Sign

State-of-the-art solution to sign documents online.

### Click & Sign Pro

Customised solution to adapt electronic signature to your current or future processes.

## eIDAS Qualified, evidence in legal proceedings

Messages sent using a qualified electronic delivery service, provide the evidence of the delivery of the message. No court of the European Union may question its documentary evidence in the event of any legal proceedings.

# Click & Sign

## Ready, steady, sign!

Improving business productivity through digital transformation

Flexible solution focused on eSignature. Click & Sign speeds up business processes and makes you stand out from the crowd giving a better user experience to your clients. Save money and time while improving efficiency.

Compliant to eIDAS, E-SIGN Act and OECD - UNCITRAL - ICC regulations.

Click & Sign provides **documentary evidence** to your contracts and signing processes.

Sign documents **any time, anywhere**. Responsive online platform, no software required.

Easy integration with any system thanks to our **APIs**.

**Multiple signatures**, joint and severally signatures.

**eKYC integration** - validates both identity and eSignature from the same platform.

Click & Sign is plain sailing. Your clients simply:

- 1 Receive**
- 2 Click**
- 3 Sign**

Once the signing process is completed, we issue a documentary evidence providing the data and attaching the signed document. The documentary evidence is digitally signed and time stamped.

### Price

Our APIs are provided free of charge, you only pay for what you use. Click & Sign comes with no set up fees.

The final price of Click & Sign Pro depends on the complexity of your requirements.

\* Fully customised

# eKYC

In an increasingly interconnected environment, validating the identity of clients is critical for business development in the digital world.

We offer end-to-end identity validation and onboarding processes in a compliant regulatory environment, thus improving customer experience. eKYC is compliant with anti money laundering (AML) regulations and for procedures for non-contact identification via video conference.

Once the validation process is completed, a certificate is issued providing all technical data related to the validation process (validation of the identity document, date and time of validation, photos of the document, and geolocation if it was activated) along with its results.

We deliver, separately, the validation data and the data read from the document by OCR.

## Convert the images of the scanned identity document into text

eKYC sends back the data of the identity document within seconds.

## Validate ID cards, passports and driving licenses

Upload or take a photo of the identity document with the webcam or mobile camera.

## Enhance eKYC Docs by adding biometric facial recognition

Digital identity validation and facial recognition to find out if the person on the other end of the transaction is who they say they are.

## The cutting edge video validation solution

Additional layer of security with biometric face-recognition and liveness detection. The process is video recorded, assisted by a live agent or in stand-alone mode. In case of a failed result, the process can be approved sometime afterwards by an agent.

## End-to-end solution for efficient workflow

Add extra layer of security to your onboarding processes with video validation and providing the electronic signature of the necessary documents.

eKYC Onboarding is fully integrated with our online contracting platform Click & Sign Pro.

# Messaging solutions

Send SMS for marketing campaigns, 2 Way SMS to interact with your clients, send two-factor authentication codes,... A universal, simple and mobile technology.

Connected with over 1,500 international operators.
